02.03.2005

Hawron goes to version 0.3.

- New CocoonBean-handling: Cocoon 2.1.(2/3/5/5.1/6/7-dev) are supported out-of the box now
- New classloader-handling: You can switch between different [Cocoon](#)-versions at runtime.
- Re-factored Context-View: Supports all apache-commons-vfs file-systems now (ftp,sftp,webdav,smb,...)
- PlainTextEditor is a plugin now, supports syntax-highlighting, can edit files on remote-filesystems.
- Most actions can work on remote-file-systems
- Import uri-files (Cocoon's cli.xconf)
- Changes on Hawron's-GUI
- Fixed OpenOffice-plugin for Java 5.0
- Fixed CocoonInstaller
- Fixed and changed External-editor/-viewer-setup
- Removed SVGViewer from source-distribution (to large, will be available separate later)
- Removed HTMLViewer (you can simple setup your browser as external-viewer; menu 'Edit->Preferences' and select plugins)
- For Windows-users added a binary-wrapper (hawron.exe) with a default-heapsize of 256MB
- and many bugfixes

25.11.2004

Hawron goes to version 0.2 now.

- Changed the license to ASL 2.0
- Processing-Log logs publishing now
- Changes on XML-Validation-GUI
- Fixed broken publishing
- Complete rewritten OpenOfficePlugin (most internal)
- Small GUI-changes on JettyPlugin
- Changes on CocoonInstaller (try [Webstart](#))
- Changes on Hawron-GUI
- Changes on the component-handling (better separated and with a XML-configfile now)
- Added small validation on the Task/Project-Dialogs
- Updated Cocoon-XML-Application (more samples/rewritten Open Office-Example)
- other bug-fixes
- Update libraries

06.10.2004

[Hawron](#) is hosted now on

04.10.2004

- Refactored package-structure
- Complete rewritten CocoonInstaller (Webstart:[CocoonInstaller](#))
- Look'n'Feel can be changed by cli or configfile
- Bugfixes

26.05.2004

Bugfixes:

- OpenOfficePlugin: some thread-problems solved (threads can connect to Open Office at the same time now)

New:

- Support most of Avalon-Lifecycle
- Configuration: search-engine (file-type-selection)
- can launch now a project at startup (CLI: -projectfile myprojectfile or inside 'conf/main.conf': projectfile=myprojectfile)

11.05.2004

Bugfixes:

- GUI-resizing-problems fixed
- (SearchEnigne - lucene) deleted files will removed from index now.
- Fixed problem with classloader-delegation
- CocoonInstaller will now cancel all working now
- Fixed Drag'n Drop to the ContextView

New:

- Plugins can add own Locale now.
- Localized JettyPlugin
- Avalon: LogEnable can now be used
- updated Jetty to the latest available version

26.04.2004

Bugfixes:

- Fixes Plugin-ClassLoader
- Fixes XMLProjectReader

24.04.2004

Bugfixes on buildsystem and CocoonInstaller

23.04.2004

Added more docs to this site and small Bugfixes.

20.04.2004

The name has changed to Hawron. Most things are refactored and switched to [Avalon](#), but it is not complete and full implement.

01.03.2004

I removed today all GPL-binding icons and artwork, so the license is now changed to the Apache Software License. Look at the [License](#) page.

29.02.2004

The first bugfix is available, which handles saving of CLI-Config more carefully. See at the [bug](#)-page.
